THE ORIGIN OF LONG ISLAND

Geological Survey Bulletin

A report on the geology of Long Island, written by Myron L. Fuller, and just issued by the United States Geological Survey, will be of interest to a very large number of persons in that thickly populated region and elsewhere. Although the mineral resources of the island are not particularly notable, some of its clays and sands are of economic value. Long Island presents numerous peculiar and interesting geologic features, and many geologists have studied it, but the extensive investigations of Mr. Fuller throw a flood of new light on the geology of the region. He has found that Long Island affords particularly clear evidence as to the history of the great continental ice sheet which covered the northern states many thousands of years ago.

Island Founded by Debris from Enormous Prehistoric Glacier.

The southern margin of this great ice sheet extended to Long Island and remained there for a long time, depositing a thick body of interbedded boulders, sand, and clay as a terminal moraine which is now the "backbone" of the island. The ice moved southward and brought these materials from the north, dropping them at its melting edge. This peculiar method of deposition developed a very peculiar topography, consisting of an irregular aggregation of hummocks and hollows, which have produced the many beautiful details of configuration that make the higher parts of Long Island so attractive to lovers of nature. The most notable of these hollows in the moraine ridge is the one holding the picturesque Lake Ronkonkoma, which lies in a depression 50 feet below the surrounding ridges. Several other similar pits are 30 to 35 feet deep and some of the larger irregular hollows are several miles in length. The report contains extended descriptions of the features of the varied configuration of the island, with lucid and interesting explanations of the origin of many details. Considerable attention is also given to the character and origin of the deep submarine channel of the Hudson, extending far out under the ocean.

Rests on a Granite Foundation.

The older rocks of Long Island consist of the granite floor, which comes to the surface near East River and Hell Gate, and clays and sands of Cretaceous age, which have been found not only to outcrop at places along the north shore but to rise in mounds of considerable height under the surficial deposits of a portion of the west central part of the island.

The geologic history of Long Island is the story of a vast lapse of time, but many of its details are illustrated by striking evidence in the relations of a great variety of deposits and diversity of configuration. The story as read in this area is also applicable to other portions of the

Atlantic coast region, and this phase of the investigation is also treated in Mr. Fuller's report. Glacial deposits, both those constituting moraines and those due to glacial waters, are so well exhibited on Long Island that each of geology and others interested in the science can find here exceptionally good illustrations in great variety. To provide for this demand a special table is included giving a list of principal points of geologic interest, with brief notes on instructive features.

Excellent Maps Included in Report.

The report includes a detailed geologic map and a topographic map of the entire island on a scale of about two miles to the inch, together with many special maps and other illustrations. To facilitate reference to the geologic map, it is divided into rectangles designated from west to east by numbers and from north to south by letters, and these references are used in the special table, table.

The report on the geology of Long Island is published as Professional Paper 82 of the United States Geological Survey, and a copy may be obtained free on application to the Director of the Survey, at Washington, D. C.

SAGE AND SULPHUR DARKENS GRAY HAIR

It's Grandmother's Recipe to Restore Color, Gloss and Thickness.

Hair that loses its color and luster, or when it fades, turns gray, dull and lifeless, is caused by a lack of sulphur in the hair. Our grandmother made up a mixture of Sage Tea and Sulphur to keep her locks dark and beautiful, and thousands of women and men who value that even color, that beautiful dark shade of hair which is so attractive, use only this old-time recipe.

Nowadays we get this famous mixture by asking at any drug store for a 50-cent bottle of "Wyneth's Sage and Sulphur Hair Remedy," which darkens the hair so naturally, so evenly, that nobody can possibly tell it has been applied. Besides, it takes off dandruff, stops scalp itching and falling hair. You just dampen a sponge or soft brush with it and draw this through your hair, taking one small strand at a time. By morning the gray hair disappears; but what delights the ladies with Wyneth's Sage and Sulphur is that, besides beautifully darkening the hair after a few applications, it also brings back the gloss and luster and give it an appearance of abundance.

Geological Explanation in Alaska

The conclusions reached at a report of six years' exploration in the Yukon-Tanana region, Alaska, by L. M. Prindle, have been published by the United States Geological Survey in Bulletin 525. At first glance the reader might be led to believe that the results are not commensurate with the time spent in the survey, but it should be understood that the area explored is nearly 3,000 square miles and that the number of days spent on the work was less than 250. Considerable time was spent in investigating the region adjacent to Fairbanks, as the extensive mining operations in that vicinity yield much information concerning the distribution of the alluvial gold.

It has been found that the placer-gold reserves of the Fairbanks district, even if only those deposits that can be mined by methods now in use are considered, are still very large. There are, however, still larger deposits of auriferous gravels whose content of gold is so small that they can be profitably handled only by improved methods of mining. These facts and the existence within the district of extensive alluvial deposits,

which have not been thoroughly prospected, make the outlook for placer mining in the region exceedingly hopeful. It is therefore by no means certain that the placer-mining industry will continue to decline as it has declined in the last two years. A large expansion of the industry in this field can be brought about only by lessening the operating costs through improved means of communication.

As compared with alluvial mining, the lode-mining operations have been important and have yielded no great body of facts upon which to base conclusions as to the persistence of the lodes. The facts presented in the report, however, show that the geologic conditions on the whole appear to be favorable to the occurrence of lode deposits and that these are not limited to the localities near Fairbanks which have been prospected.

The report contains a detailed description of the Fairbanks district by L. M. Prindle and J. J. Katz and an account of lode mining near Fairbanks by Philip S. Smith. A copy may be obtained free on application to the Director of the Geological Survey at Washington, D. C.

TWENTY-FIVE TAKE CEREMONIAL AND OFFICIAL WORK

Two Join Class to Investigate Beautiful Symbolism of Higher Degrees of Scottish Rite Masonry.

Santa Fe, N. M., Feb. 26.—Two candidates joined the Scottish Rite class which yesterday finished its work of investigation into the symbolism of the higher Scottish Rite Masonic degrees in time to take the official and ceremonial degrees, thus bringing the total class membership up to 25. They were Don P. Johnson and Harry H. Maxwell, the last named, a recent resident in Santa Fe, being admitted under special dispensation from Washington.

The class organized as the "George Washington Class," and named Charles H. Field, who first journeyed to this southwestern country a quarter of a century ago, its president. H. H. Maxwell was named secretary. Elmer E. Studley of Raton, was named as class orator.

A dance in the temple, with a concert of pretentious type, closed the week of festivity.

The officers of the consistory are as follows:

Harry S. Rowland, master of Kadash; Harry H. Dornash, prior; Elmer J. DeArcey, preceptor; Charles M. Stauffer, chancellor; Frederick Muller, almoner; Frank E. Andrews, minister of state; Melvin T. Dunleavy, registrar; Hiram B. Cartwright, treasurer; Carl C. Eden, prime; Wesley O'Connor, master of ceremonies; Robert L. Cooper, expert; Edward R. Paul, assistant expert; Samuel G. Cartwright, captain of the guards; George A. Riddle, sentinel; Charles A. Wheelon, Richard H. Hanna, Charles F. Kanen, Francis C. Wilson and James A. Mammie, past masters of Kadash.

Inspectors General Honorary Thirty-Third Degree—Cony T. Brown, Socorro; Edward A. Cahoon, Roswell; James G. Fitch, Socorro; Richard H. Hanna, Santa Fe; Nathan Jaffa, Roswell; John W. Mayes, Santa Fe; John W. Poe, Roswell.

Knight Commander of the Court of Honor, Thirty-Second Degree—Samuel C. Clark, Madrid; Frank J. Easley, Des Moines, Ia.; William S. Harrison, Santa Fe; James P. Hinkle, Roswell; James A. Mammie, Santa Fe; Edward R. Paul, Santa Fe; Solomon Spitz, Santa Fe; Benjamin Titus, Deming; Charles A. Wheelon, Santa Fe; James H. Wroth, Albuquerque; Charles F. Kanen, Santa Fe.

Life Members—Edward A. Cahoon, Roswell; Joseph DeGraffenreid, Buchanan; Clark D. Bailey, Roswell; Henry L. Patton, Black Rock; Allan French, Raton; Hugh M. Gage, Hope; Samuel C. Hanna, San Marcial; Nathan Jaffa, Roswell; Joseph Jaffa, Roswell; Walter H. Long, Roswell; James A. Mammie, Santa Fe; John W. Poe, Roswell; James A. Rolfs, Santa Fe; Arthur Seligman, Santa Fe; John Shaw, Roswell; Salmon Spitz, Santa Fe; Benjamin Titus, Deming; James P. White, Roswell; Walter J. White, Roswell.

Features of the week were the excellent musical numbers and the daily luncheons furnished by the ladies of the Eastern Star.

Fifty Convicts Paroled.

Dallas, Tex., Feb. 26.—Reverend paroled for fifty convicts were signed by Governor O. B. Colquitt of Texas today and with their departure from the Huntsville penitentiary the state inaugurated an experiment in the management of prisoners without guards or shackles and a profit-sharing plan for their work on public roads.

The state will receive \$15 a month for each convict's labor. Half of this will go to the penitentiary fund and half to the man's personal account. The county in which the men work will maintain them without the expense of guard and overseer. All of the men selected for parole are white, between the ages of 20 and 35 and have served the greater part of terms of five years or less.

QUARANTINED GLEE CLUB MAY GO ON EAST TONIGHT

No New Cases Develop Among Missouri Boys Infected With Small-Pox; Three at Hospital Doing Well.

That the members of the Missouri University Glee club, quarantined here yesterday because of smallpox infection, would probably be permitted to go on east to their homes tonight, was the statement this morning of Dr. J. W. Elder, superintendent of the Santa Fe coast lines hospital, who has been in charge of the case. Three cases developed yesterday. Two were taken to the detention hospital about 8 o'clock last night and one an hour or so later. None of them, Dr. Elder said, seemed at all serious.

The first hint of infection came in a telegram from Winslow asking that a physician meet No. 2, the train on which they were traveling, when that train arrived here yesterday afternoon. Dr. W. R. Lovelace met the train and said he had no doubt that the two boys who were then on the sick list had smallpox. They were Dr. E. Hudson of Montgomery, Mo., and R. E. Miller of Savannah, Ga.

The car was set out here, the singers transferred to another car and the car and impedimenta fumigated. This morning the car in which they spent the night was fumigated.

Virgil C. Kling, of Savannah, showed symptoms later and was taken to the hospital about 9:30.

The boys evidenced some disposition to stray from the car but were detained by Depot Master M. J. Byrnes. They did not seem to be unhappy, as songs and instrumental music floated from the car until a late hour.

The cars were left at their location near Central avenue because that is the only place where steam can be turned into them for heating purposes and where they can be supplied with water.

After being fumigated today the crowd was allowed to leave the cars and they spent the morning playing baseball, singing impromptu songs and giving Missouri yells. Some of them presented funny sights, as they were not permitted last night to take anything with them from the car which was being disinfected and consequently had to wear today the garments in which they were yesterday evening. One dignified professor spent the day in a dress suit and top hat.

The boys had a motion picture camera with them as well as several kodaks and numerous films were taken of them this afternoon, both by their own artists and by townspeople.

Every Precaution Taken.

Mayor Collier and the board of health today received a number of inquiries as to why the cars were permitted to remain on the Central avenue private car switch. The first reason was the necessity of supplying heat to the cars, and every precaution was taken to see that no one came near. The Santa Fe placed an officer at the cars early this morning and the mayor also placed a policeman on the street.

Members of the club today said they were unable to give any idea as to where, when or how the infection was encountered. They have covered the Santa Fe coast lines as far west as Los Angeles during the past two weeks, having passed through Albuquerque on the westward trip some two weeks since.

Painting Lincoln Highway.

San Francisco, Feb. 26.—After painting the first Lincoln highway sign on a street post in Market street, H. E. Frederickson, engineer at large for the highway, left with a party of planners in a pathfinding automobile to blaze the highway through California, painting poles as they go.

Their route is by way of Truckee, 270 miles distant, in the Sierra Nevada and a sign is to be painted in every city block and every mile of country road.

New York is the eastern terminus of the Lincoln trans-continental highway and San Francisco the Pacific terminus.

Don't buy a car until you see the Hudson.

That Jar of MUSTEROLE On the Bath Room Shelf

It's a relief pain for nearly everyone in the family. When little Susie had the croup, when Johnny got his feet wet and caught cold, when father sprained his knee, when Grandma's rheumatism bothered her—

That Jar of MUSTEROLE was right there to give relief and comfort. MUSTEROLE is a clean, white ointment, made with oil of mustard. It will not blister like a mustard plaster.

Quick relief for Sore Throat, Bronchitis, Tonsillitis, Croup, Stiff Neck, Asthma, Neuralgia, Headache, Congestion, Pleurisy, Rheumatism, Lumbago, Pains and Aches of the Back or Joints, Sprains, Sore Muscles, Bruises, Chills, Frosted Feet, Colds on the Chest (it prevents Pneumonia). Nothing like MUSTEROLE for croupy children.

In 25c and 50c jars, and a special large hospital size for \$2.50.

Accept no substitute. If your druggist cannot supply you, send 25c or 50c to the MUSTEROLE Company, Cleveland, Ohio, and we will mail you a jar, postage paid, (60) S. J. Buchanan, Lowellville, Ohio, says:

"We have been using Musterole for two or three years past and find it very good. It is always in our medicine cupboard."

MUSTEROLE TWO GOOD SHOWS AT ELKS' THEATRE THIS WEEK

"The Girl in the Taxi" This Evening; "The Price She Paid" Comes On Friday.

"The Girl in the Taxi," said to be the funniest comedy produced in this country for the past decade will be here tonight and the management of the Elks' theater is confident, that in bringing this merry play to this city it has secured one of the hits of the season. A number of catchy musical numbers are interpolated through out the action of the play, including the latest craze of the year, the "Argentinian Tango." The company presenting this funny comedy is headed by George Falkner, one of the best light comedians on the American stage, and the support is said to be splendid. The entire scenic production is also carried.

"The Price She Paid," Friday. A few weeks ago, when the newest dramatized story, "The Price She Paid," was being presented in Cincinnati, the management was much surprised to receive a visit from six clergymen, all of whom had heard about the play and were anxious to see it for themselves. It was at first thought that these reverend gentlemen might take some offense at the clear, plain manner in which the story of the play was told. Much to everyone's surprise, however, when the final curtain was rung down, the clergymen complimented the management upon the absorbing interest of the play, as well as the high moral lesson which they readily saw was taught.

"Our girls now-a-days" remarked one of the clergymen, himself a high dignitary of the church, "have untold temptations cast in their way. This is especially true of the larger cities, where mothers are so eager seeking entertainment themselves that they have no time to watch over their daughters' welfare. I often wished that someone would bring us a play like this, which would prove so conclusively to young girls that the best thing for them is the straight and narrow path. The highway of sin may glitter and be very inviting for the time being, but there is a bottomless pit at the other end of the road of pleasure, from which rescue is impossible. Once a girl finds herself in this maelstrom of vice, no hand is held out to her, and there is no chance for lasting reforms."

"I am glad I saw 'The Price She Paid.' I am going to my congregation and tell them to see this play by all means. It will purify their soul, it will make all the men have a better opinion of women and it will make all young girls realize what a priceless thing is their virtue."

Headed by a metropolitan cast, and having as its star no less a competent actress than Mrs. Rachel May Clark, this great play, which has been pronounced even more absorbing than David Graham Phillips' book, will be seen at the Elks theater next Friday night.

MRS. CAIN PLEASES LAST NIGHT

Gifted Pianologist Who Appears at the Presbyterian Church Tonight Delights Select Gathering.

That Mrs. Belle Maxwell Cain is one of the most gifted entertainers who have ever appeared in Albuquerque was demonstrated last night when she delighted fifty members of the Y. W. C. A. and friends at the Y. W. C. A.

building. Her readings were "Tony the New Boy in Tony's White Room," by Winifred Rich, and "My Old Sol," by Paul Dresser, the latter with piano accompaniment. Mrs. Cain's talent is of a very unusual kind, her personality most attractive and magnetic and those who heard her last night are unqualified in their praise of her work. Refreshments were served and a beautiful bouquet of carnations and ferns were presented to Mrs. Cain. Mrs. Cain appears in concert to night at 8:15 at the Presbyterian church.

For baby's croup, Willie's daily cuts and bruises, mamma's sore throat, Ed would aid his hens to produce eggs of the graded degree of whiteness. He tried the experiment and the eggs grew whiter, but not fast enough to suit him. He then increased the doses, but his hens soon stopped laying eggs of any color, and a week ago one of them died. Today all that was left of his flock was one old rooster, which Mr. Craner would like to give away.

Can furnish you with any kind of tree, vine or shrub. Single ones or by the thousand. F. W. FEE.

THE AMERICAN ADDING MACHINE

The Latest Adder COSTS BUT \$35 Ask for Demonstration

Here is a new price on a complete Adder. On a machine that is rapid, full-size and infallible.

The very latest machine, built by men who know, in one of the largest metal-working shops.

It is an individual Adder, to be placed on one's desk, close to one's books and papers. To take the place of the central machine requiring skilled operators.

It is also intended for offices and stores where costly machines are a luxury.

The price is due to utter simplicity, and to our enormous output. Seven keys do all the work.

Now we make the machine so that office everywhere may learn what this machine means to them.

TEN DAYS TEST We will gladly place in any office one American Adder for a ten days' test.

There will be no obligation, and charges.

Compare it with any non-flier—even the costliest. Let anyone use it. See if any machine can serve better than this.

Just send us this coupon and we'll send the machine.

Please send us an American Adding Machine for ten days' free trial.

A Fowl Deed.—John B. Craner, president of the board of education, had a fine flock of chickens which he was desirous of selling. He was told by a prospective purchaser, who looked at some of the eggs, that the eggs were not white enough for the New York market, to which he was shipping.

A friend advised him that small dose of peroxide of hydrogen, diluted would aid his hens to produce eggs of the graded degree of whiteness. He tried the experiment and the eggs grew whiter, but not fast enough to suit him. He then increased the doses, but his hens soon stopped laying eggs of any color, and a week ago one of them died. Today all that was left of his flock was one old rooster, which Mr. Craner would like to give away.
